

Connection Technology for MOBILITY

WECO AND MOBILITY

Mobility means movement, speed, and flexibility under all possible environmental conditions. Temperature variations, vibration, and weather conditions are only part of the challenges that components have to sustain.

For more than 100 years, we have been offering products that continuously meet the quality and reliability needs of industrial markets.

Durability, minimum maintenance, and safety are essential features of our solutions. Regardless if it is a standard or customized solution; WECO enables the flexibility and stability that you would expect as a customer.

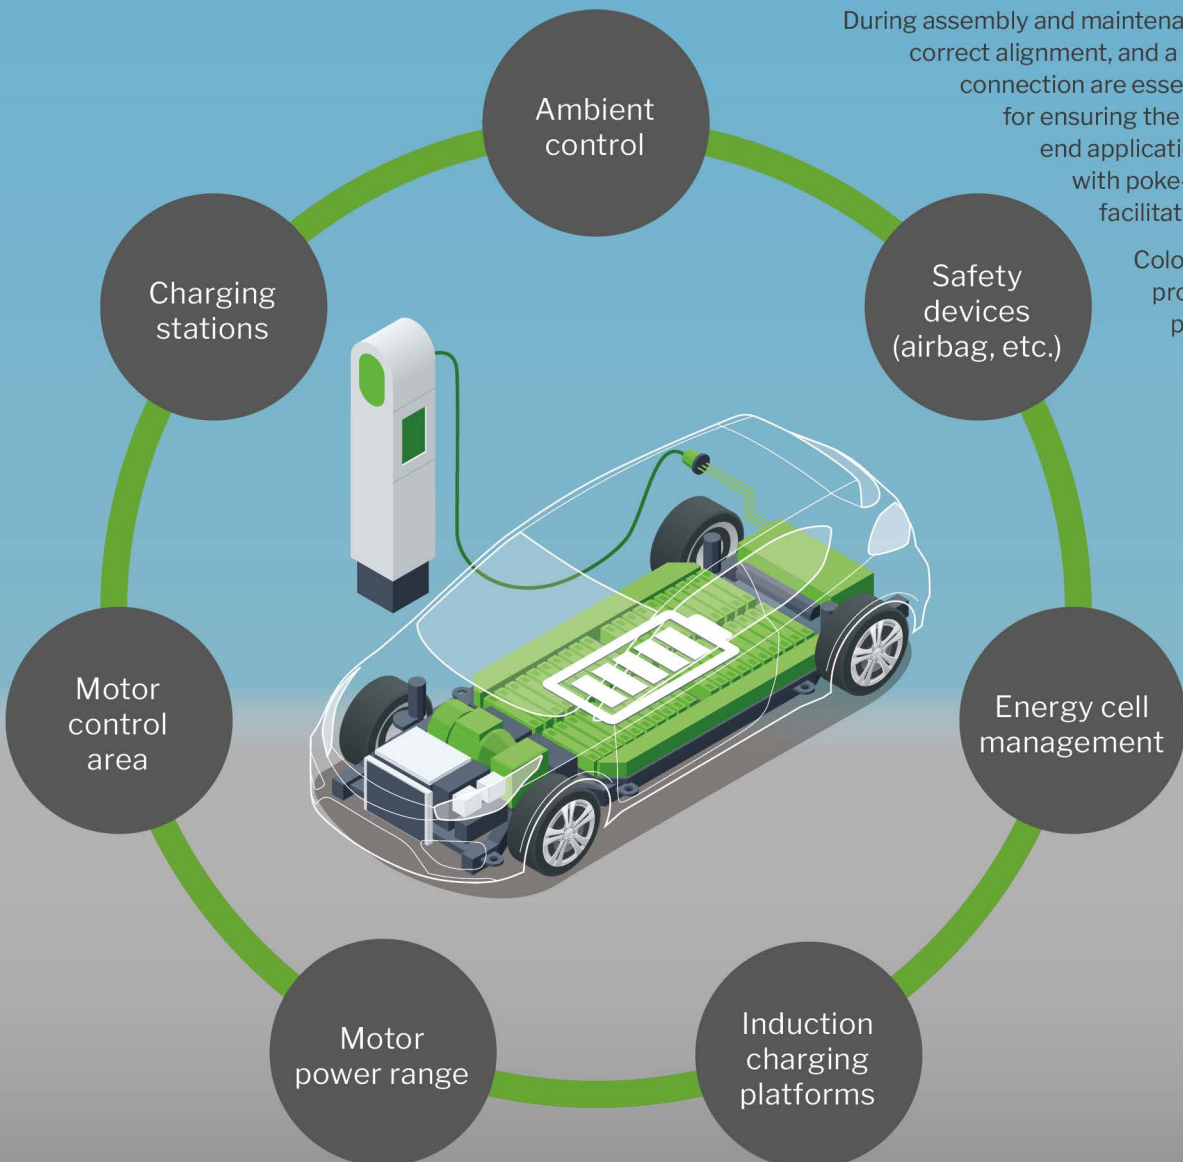

E-MOBILITY

E-mobility is a market trend that is here to stay and is being driven forward as the technology for it rapidly develops. Incidentally, WECO's technology has been designed into applications in the mobility sector for decades.

Outdoor areas such as charging stations and platforms are typically subject to fluctuations in temperature, vibrations, liquids, or gases. High temperatures also develop in the energy cells of electric cars, and our products can withstand these variations.

During assembly and maintenance, speedy handling, correct alignment, and a secure plug-in connection are essential prerequisites for ensuring the functionality of the end application. Our products with poke-yoke systems can facilitate these requirements.

Color coding, anti-twist protection, over-mating protection, and individual labeling are just a few examples of how we can implement a connection solution that is optimal and safe.

Discover where our Products connect with your Applications

TRANSPORTATION

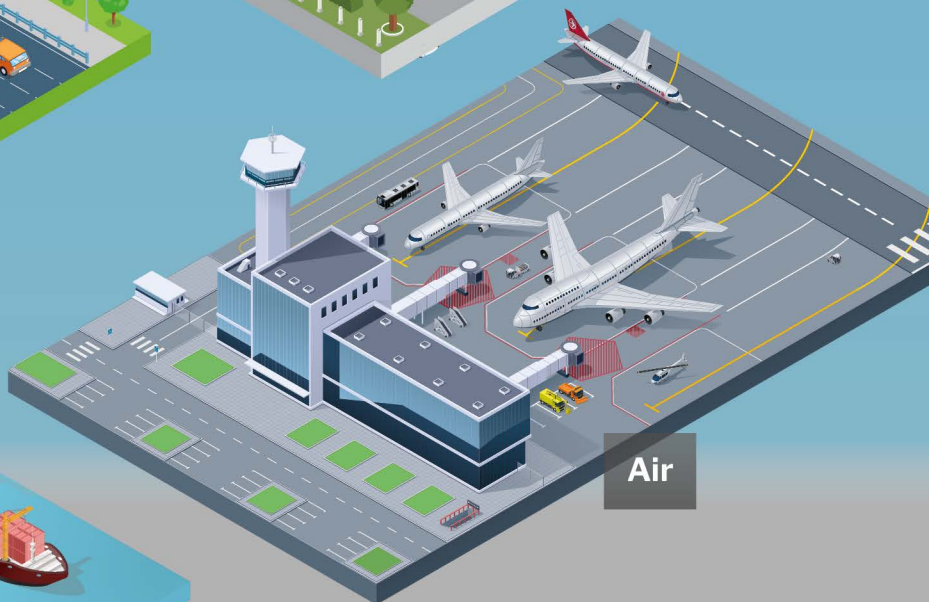

Street & Tunnel

Railway

Air

Water

Applications on printed circuit boards can be found in almost all areas of transportation. Lighting systems in tunnels or on roads, airports or on railroads, state-of-the-art components are now installed everywhere.

It is therefore all the more important that applications in critical areas operate trouble-free and are reliable. We bring the knowledge of each individual area of application to equip individual applications with high-quality and extremely reliable products that are equally tailored to their needs. Our connection solutions reduce high maintenance costs, ensure the longevity of your product.

TRAFFIC MONITORING & REGULATION

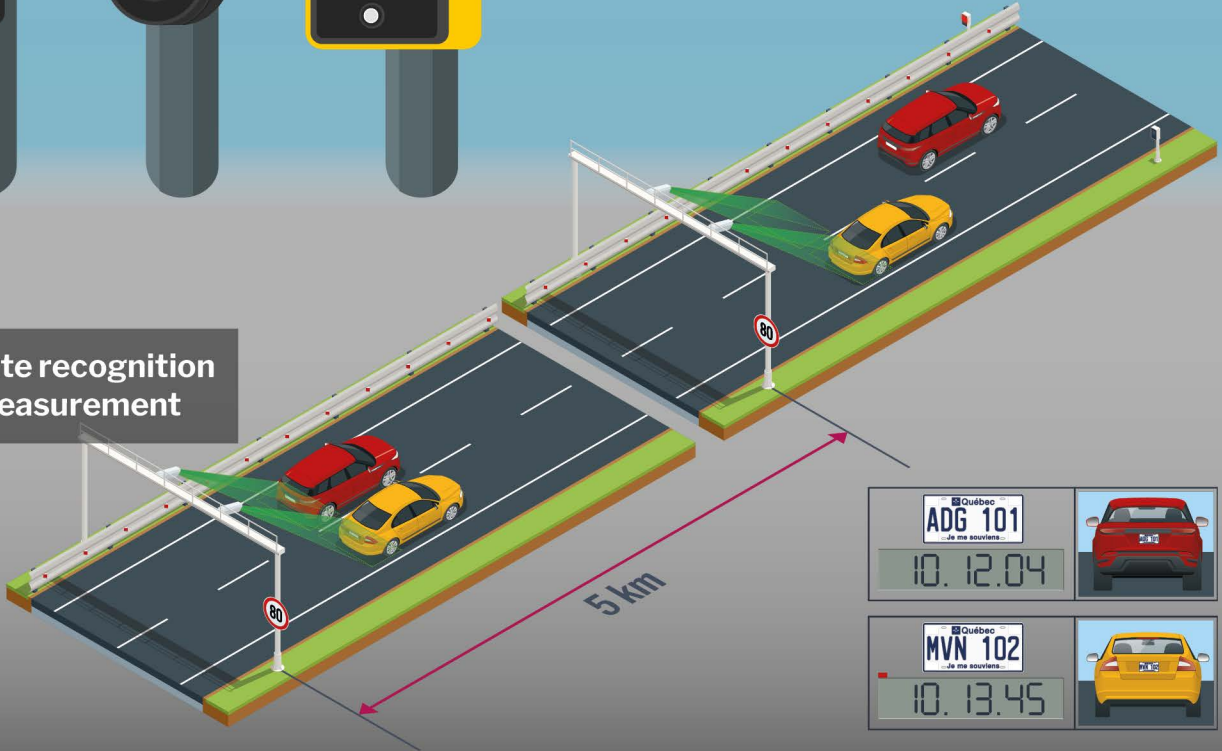

Safety on the roads is becoming increasingly important in the face of rising traffic. For example, camera systems for recognizing license plates and traffic volumes as well as automatically responding information boards are now standard and signal requirements at pedestrian lights are a must for the safety of passers-by.

Therefore, in the case of failure, it is necessary to have components that can be replaced quickly, with ease and safety in mind. Count on the various features offered by WECO for reliable high-quality solutions that make installation simple such as Poka Yoke systems or simple markings.

TRADITION & INNOVATION

We see ourselves not only as a manufacturer and supplier of electrical connection solutions, but as a true partner with many years of experience.

Since the foundation of WECO in 1921, our most important task has always been to establish a close cooperation with our customers. We accompany projects together from the first discussion over sketches and prototypes up to the finished product. In doing so, we consider the best possible options to incorporate the most innovative materials and technologies.

However, our service does not end with the delivery of our products. Thanks to our dedicated teams globally, WECO continues to support its customers long after the products have been delivered. Regular communication is just the beginning.

As your partner, you get the highest level of competence and continuous support for your projects and subsequent project requirements.

We focus on a lasting partnership with long-lasting products. With these prerequisites, we know which properties and technical specifications are required for the end application and are incorporated into the design or selection of the right product.

Our quality and its brand form a perfect symbiosis - in the present and for the future.

CONNECTING INDUSTRIES FOR OVER 100 YEARS!

We are an engineering based company specialized in developing, manufacturing and optimizing electrical connection solutions for the energy, industrial, electrical, and electronic markets.

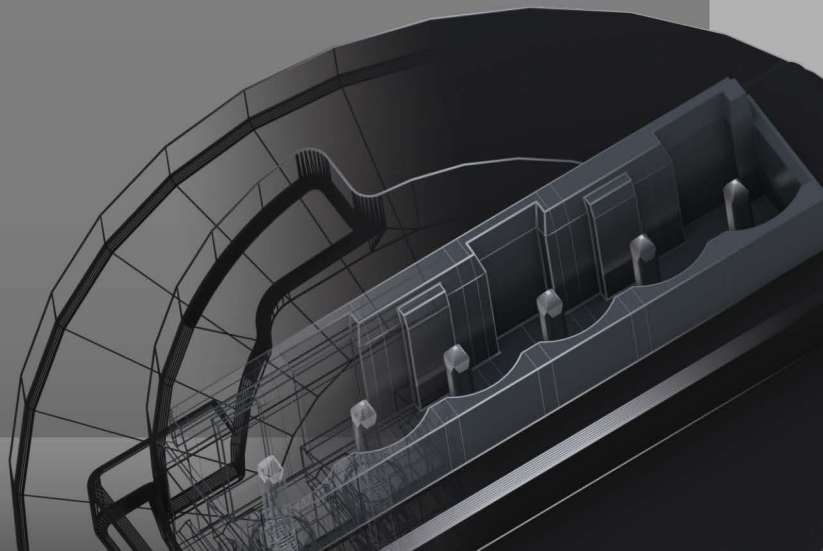

Founded 1921 in Germany, we are a global company headquartered in Montreal, Canada, with sales and manufacturing sites in seven key locations around the world.

We provide excellent value to our customers by developing, enhancing, and tailoring our connectors to their needs.

We strive to get it right the first time, every time, through continuous process improvement and fostering business relationships with customers.

Our streamlined manufacturing production delivers components that offer superior reliability, reduced footprint, and compact designs.

These advantages have resulted in reduced lead times and greater efficiency, creating greater return on investment for the end user.
